New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

Claim 1; SEQ ID No 27820; 103pp; English

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polypucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC specification, but was obtained in electronic format directly from WIPO case for the polypholyphical acts of this patent did not appear in the printed CC appetition of the coloring sequences of the invention. ftp.wipo.int/pub/published\_pct\_sequences.

Ruben SM, Olsen HS, P-PSDB; 2000-062296/05 DB; AAY76266. DW, Florence K, Shi Y, You Endress e K, Ni J, Rosen Young PE, Wei F, ss GA, Ebner R; ĽΑ, Soppet Moore pet DR;

New isolated human genes and the secreted polypeptides they encode, useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders -

Disclosure; Page 427-428; 475pp; English.

CC AAX65250 to AAX65350 represent 97 isolated human secreted protein genes.

CC This sequence was found to be present on human chromosome 10.

CC AAY76124 to AAAY76223 represent the secreted proteins encoded by the 97

CC human genes. The genes and their corresponding secreted polypeptides are

CC useful for preventing, treating or ameliorating medical conditions,

CC e.g. by protein or gene therapy. Also pathological conditions can be

CC diagnosed by determining the amount of the new polypeptides in a sample

CC uses are described for each of the 97 genes, based on which tissues they

CC uses are described for each of the 97 genes, based on which tissues they

CC are most highly expressed in, and include developing products for the

CC diagnosis or treatment of cancer, tumours, developmental abnormalities

CC and foetal deficiencies, blood disorders, diseases of the immune system,

CC autolimune diseases, inflammation, allergies, Alzheimer's and cognitive

CC disorders, atherosclarosis, diabetes, cardiovascular disorders, kidney

CC disorders, digestive/endocrine disorders, infections and AIDS. The

CC olypeptides are also useful for identifying their binding partners.

CC The sequences shown in AAY76224 to AAY76424 represent fragments of the proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1215
```

Secretory proteins play important roles in the proliferation control, differentiation induction, the material transport and the biophylaxis cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membra

sequence

of.

The encoded protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopoiesis activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemacostatic and thrombolytic activity, anti-inflammatory activity and tumour inhibition activity. The present sequence could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's disease, and cancer via gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

Nucleic acids encoding secreted TANGO and MANGO polypeptides, for the prevention, diagnosis and treatment of, e.g. cancers  $\hat{\epsilon}$ 

and

immune

```
CC The invention relates to novel secreted/transmembrane proteins, and Cnucleic acids encoding them. The novel proteins are designated TANGO 339, CC TANGO 353, TANGO 358, TANGO 365, TANGO 368, TANGO 369, TANGO 383, TANGO CC 393, TANGO 402, MANGO 346 and MANGO 349 and are of human origin, and a CC murine TANGO 393 is also included within the scope of the invention. The Ci invention also encompasses fragments and variants of the proteins of the invention and nucleic acids encoding them. The invention additionally CC relates to host cells comprising a nucleic acid of the invention; methods CC for the production of a protein of the invention; and artibody specific CC for a protein of the invention; and tetecting a protein of CC ucleic acid of the invention; and methods for detecting a protein of the invention; and methods of identifying agents which CC bind to or modulate the activity of a protein of the invention. The novel CC secreted proteins, nucleic acids encoding them, and antibodies against the may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate expression or activity of the secreted CC proteins. The secreted proteins of expression or activity, which may be useful in CC invention e.g., cancers and immunological disorders. The present CC sequence represents CDNA encoding human TANGO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 813

The invention relates to novel secreted/transmembrane proteins, and convolute acids encoding them. The novel proteins are designated TANGO 339, CC TANGO 353, TANGO 358, TANGO 365, TANGO 368, TANGO 369, TANGO 383, TANGO CC 393, TANGO 402, MANGO 346 and MANGO 349 and are of human origin, and a cmarine TANGO 393 is also included within the scope of the invention. The cinvention also encompasses fragments and variants of the invention and nucleic acids encoding them. The invention additionally correlates to host cells comprising a nucleic acid of the invention; methods for the protein of the invention; methods for detecting a protein or convolute the activity of a protein of the invention; and antibody specific corrected proteins, nucleic acids encoding them, and antibodies against them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression or activity of the secreted corrected proteins of the invention may also be used to identify modulators of expression or activity, which may be useful in the treatment of disorders associated with the preventions of the invention of the invention of identify modulators of expression or activity of the secreted corrections. The secreted proteins of the invention may also be used to identify modulators of expression or activity, which may be useful in the treatment of disorders and immunological disorders. The present corrections of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 200

The invention relates to novel secreted/transmembrane proteins, and convoleic acids encoding them. The novel proteins are designated TANGO 339, CC TANGO 353, TANGO 365, TANGO 368, TANGO 383, TANGO 283, TANGO 383, TANGO CC 393, TANGO 402, MANGO 346 and MANGO 349 and are of human origin, and a company of the invention. The invention also encompasses fragments and variants of the proteins of the invention; and nucleic acids encoding them. The invention additionally convention, and nucleic acids encoding them. The invention additionally convention, and nucleic acids encoding them another protein of the invention; an antibody specific for the production of a protein of the invention; an antibody specific convention acid of the invention; and methods for detecting a protein or convention acid of the invention; and methods of identifying agents which convention acid to or modulate the acid encoding them, and antibodies against convention. The novel convention is the invention of the invention of associated with inappropriate expression or activity of the secreted convention. The novel consistency is the invention may also be used to consist the invention of activity of the secreted proteins. The secreted proteins of expression or activity, which may be used to consist the invention of activity of the secreted proteins.
Sequence 813 BP; 163 A; 212 C; 235 G; 203 T; 0 other;
                                                                                                                                     the treatment of disorders associated with the proteins of the invention e.g., cancers and immunological disorders. The present sequence represents cDNA encoding human TANGO protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                   CC The invention relates to novel secreted/transmembrane proteins, and CC nucleic acids encoding them. The novel proteins are designated TANGO 339, CC TANGO 353, TANGO 356, TANGO 365, TANGO 369, TANGO 369, TANGO 383, TANGO CC 393, TANGO 340, MANGO 346 and MANGO 349 and are of human origin, and a CC invention also encompasses fragments and variants of the proteins of the invention. The CC invention, and nucleic acids encoding them. The invention additionally CC relates to host cells comprising a nucleic acid of the invention; methods CC for a protein of the invention; and methods of identifying approach of the invention; and methods for detecting a protein or CC nucleic acid of the invention; and methods for detecting a protein or CC bind to or modulate the activity of a protein of the invention. The novel CC secreted proteins, nucleic acids encoding them, and antibodies against them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression or activity of the secreted conductors of expression or activity, which may be useful in the treatment of disorders associated with the proteins of the invention of the invention e.g., cancers and immunological disorders. The present contains the proteins of the invention of the invention of the invention of the present contains of the invention of the invention of the present contains of the invention of the invention of the invention of the invention e.g., cancers and immunological disorders.                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                   predisposition to, a disease associated with altered levels of SECX proteins and nuclectides. The SECX proteins are also useful to screen compounds that modulate SECX activity or expression. The interaction of a SECX protein with other cellular proteins may be useful to modulate the activity of a partner protein, cellular proliferation, cellular cell survival. SECX nucleotides are useful for the recombinant expression of SECX protein, and may be used detect SECX mRNA or genetic lesions in the SECX gene. They may also be used to modulate SECX expression (e.g., using antisense oligonuclectides). SECX nucleic a biological sample, and in forensic biology. SECX primers or probes are useful for detecting the presence of SECX nucleotides) are cultures for contamination. Diseases that may be treated or prevented using SECX proteins or nucleotides and for screening tissue cultures for contamination. Diseases that may be treated or prevented using SECX proteins or nucleotides and for screening the presence of SECX nucleotides and for screening the presence of SECX nucleotides and for screening this protein and screening the presence of SECX nucleotides and for screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences AAA93616-A93631 and AAA93673-A93676 represent nucleic acids which encode human SECX proteins (AAB23029-B23048). The SECX proteins of the invention are either secreted or membrane-associated proteins and act as regulator of cellular proliferation and differentiation. SI proteins or nucleotides are useful for diagnosing the presence of or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       colorectal carcinoma, prostate cancer), benign tumours, immune disorders (including autoimmune diseases, transplant rejection, allergies, AIDS), (infections, inflammatory disorders, arthritis, haematopoietic disorders,
                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human membrane associated or secreted polypeptides and polynucleotides useful for diagnosis, prevention and treatment of pathological states such as cancer, immune, cardiovascular and neurological disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC polypertide (II) sequences. (I) is useful as hybridisation probes, CC polyperase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical cimaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynuclectide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. As564197-As594564 represent novel human CC unit of the sequences of this patent did not appear in the printed constitution, but was obtained in electronic format directly from WIPO at figure in the printed products of the invention.

Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the blophylaxis of cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membrane protein. The encoded protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopolesis activity, tissue growth activity, haematopolesis activity, chemotactic/chemokinetic activity, haemostatic

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                         CC The invention relates to novel secreted/transmembrane proteins, and CC nucleic acids encoding them. The novel proteins are designated TANGO 339, CC TANGO 353, TANGO 356, TANGO 368, TANGO 369, TANGO 383, TANGO CC 393, TANGO 402, MANGO 346 and MANGO 349 and are of human origin, and a CC murine TANGO 393 is also included within the scope of the invention. The CC invention also encompasses fragments and variants of the proteins of the cinvention, and nucleic acids encoding them. The invention additionally CC relates to host cells comprising a nucleic acid of the invention; methods for the protein of the invention; and antibody specific CC for a protein of the invention; methods for detecting a protein or concleic acid of the invention; and methods of identifying agents which CC bind to or modulate the activity of a protein of the invention. The novel cassociated with inappropriate expression or activity of the secreted proteins. The prevention, diagnosis and treatment of diseases cassociated with inappropriate expression or activity, which may be used to concention e.g., cancers and immunological disorders. The present CC invention e.g., cancers and immunological disorders. The present concention of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding secreted TANGO and MANGO polypeptides, useful for the prevention, diagnosis and treatment of, e.g. cancers and immune

The invention also provides TSPAN-7 polypeptides and polynuclectides. TSPAN-7 inhibitors are useful for inhibiting proliferation of mammalian cells, including tumour cells, for decreasing the side effects of cancer therapy and for treating neoplastic diseases. They are used to modulate TSPAN-7 expression and function in cancer cells, particularly in prostate cancer cells. They are also used in antisense therapy. The present sequence is human TSPAN-7 protein encoding cana

                                                                                                                                                              CC The invention relates to novel secreted/transmembrane proteins, and concleic acids encoding them. The novel proteins are designated TANGO 339, TANGO 353, TANGO 358, TANGO 365, TANGO 368, TANGO 369, TANGO 383, TANGO 393 is also included within the scope of the invention. The convention also encompasses fragments and variants of the proteins of the invention, and nucleic acids encoding them. The invention additionally crelates to host cells comprising a nucleic acid of the invention; methods for the production of a protein of the invention; an antibody specific for a protein of the invention; methods for detecting a protein or nucleic acid of the invention; methods of bind to or modulate the activity of a protein of the invention. The novel creatment by used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression or activity of the secreted proteins. The secreted proteins of the invention may also be used to identify modulators of expression or activity, which may be used to the treatment of disorders associated with the proteins of the invention of the invention e.g., cancers and immunological disorders. The present convention and immunological disorders. The present

The invention relates to novel secreted/transmembrane proteins, and concleic acids encoding them. The novel proteins are designated TANGO 339, CANGO 353, TANGO 358, TANGO 356, TANGO 368, TANGO 369, TANGO 383, TANGO 393, TANGO 346 and MANGO 349 and are of human origin, and a convention also encompasses fragments and variants of the invention. The invention, and nucleic acids encoding them. The invention additionally convention of the invention of a protein of the invention; an antibody specific for the production of a protein of the invention; an antibody specific concleic acid of the invention; and methods for detecting a protein or nucleic acid of the invention; and methods of identifying agents which indicated acid of the invention; and methods of identifying agents which concleic acid of the invention; and methods of identifying agents which concleic acid of the invention; and methods of identifying agents which concleic acid of the invention; and antibodies against the secreted proteins, nucleic acids encoding them, and antibodies against the proteins. The secreted proteins of the invention may also be used to concleit the may be used to the treatment of disorders associated with the proteins of the invention may be used to the treatment of disorders associated with the proteins of the invention.

CC invention e.g., cancers and immunological disorders. The present convention are represents cDNA encoding human TANGO protein of the invention.
Nucleic acids encoding secreted TANGO and MANGO polypeptides, useful for the prevention, diagnosis and treatment of, e.g. cancers and immune disorders - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      P-PSDB;

cc murine TANGO 393 is also included within the scope of the invention. The cinvention also encompasses fragments and variants of the proteins of the clivention, and nucleic acids encoding them. The invention additionally cc relates to host cells comprising a nucleic acid of the invention; methods cf or the production of a protein of the invention; an antibody specific cc for a protein of the invention; and methods for detecting a protein or culcic acid of the invention; and methods of identifying agents which cs secreted proteins, nucleic acids encoding them, and antibodies against them may be used in the prevention, diagnosis and treatment of diseases cc associated with inappropriate expression or activity of the secreted cc identify modulators of expression or activity, which may be useful in cc identify modulators of expression or activity, which may be useful in cc invention e.g., cancers and immunological disorders. The present cc sequence represents cDNA encoding human TANGO protein of the invention.

                                 The invention relates to novel secreted/transmembrane proteins, and convocation and convocations are designated TANGO 339, TANGO 358, TANGO 358, TANGO 368, TANGO 369, TANGO 383, TANGO 393, TANGO 358, TANGO 369, TANGO 369, TANGO 383, TANGO 383, TANGO 393, TANGO 393 is also included within the scope of the invention. The convention and nucleic acids encoding them. The invention additionally relates to host cells comprising a nucleic acid of the invention, methods for the production of a protein of the invention; an antibody specific for a protein of the invention; methods for detecting a protein or concluded a protein of the invention; and methods of identifying apents which bind to or modulate the activity of a protein of the invention. The novel concreted proteins, nucleic acids encoding them, and antibodies against them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression or activity of the secreted proteins. The secreted proteins of the invention may also be used to the treatment of disorders associated with the proteins of the invention of the invention e.g., cancers and immunological disorders. The present of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В

                                                                                                    AA265250 to AA265350 represent 97 isolated human secreted protein genes. This sequence was found to be present on human chromosome 10.

AAY76124 to AAY76223 represent the secreted proteins encoded by the 97 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions.

C. e. g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 97 genes, based on which tissues they care most highly expressed in, and include developing products for the CC diagnosis or treatment of cancer, tumours, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, cautoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skin clasorders, atherosclerosis, diabetes, cardiovascular disorders, kidney consorters, digestive/endocrine disorders, infections and AIDS. The collypeptides are also useful for identifying their binding partners.

The sequences shown in AAY76224 to AAY76424 represent fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                            õ
                                                                                                                                              Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and C polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The C polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or G (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess blodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed content pulps and not forential content pulps and not septimine and not appear in the printed content pulps and not produce of the number of the pulps and the printed content pulps and produce of the number of the pulps and produce of the numbe
                                                                                                                                                                                                                        US-09-905-674-2
                                                                                                                                                                                                                                                                                                                 Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID No 27820; 103pp; English.

The SECX proteins are also useful to screen CC compounds that modulate SECX activity or expression. The interaction of CC a SECX protein with other cellular proteins may be useful to modulate CC the activity of a partner protein, cellular proliferation, cellular cCC differentiation and cell survival. SECX nucleotides are useful for the CC recombinant expression of SECX protein, and may be used detect SECX mucleot collular cCC acid sequences are also useful for identifying a cell or tissue type in CC acid sequences are also useful for identifying a cell or tissue type in CC abiological sample, and in forensic biology. SECX primers or probes are CC useful for detecting the presence of SECX nucleotides and for screening CC tissue cultures for contamination. Diseases that may be treated or CC prevented using SECX proteins or nucleotides include cancer (e.g., infections, inflammatory disorders, arthritis, haematopoietic disorders, cardiovascular disorders, arthritis, haematopoietic disorders, cs., Alzhaimer's disease), trauma (e.g., restenosis, restenosis, con surgical or traumatic wounds, spinal cord injury), and skeletal

                                                                                                                                                                                                                                                                                       US-09-905-674-2 (1-270) x AAZ65350 (1-1667)
                                                                                                                                                                                                                                                                                                                                                              Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC AA265250 to AA265350 represent 97 isolated human secreted protein genes. CC This sequence was found to be present on human chromosome 10. AAY76124 to AAY76223 represent the secreted proteins encoded by the 97 cc AAY76124 to AAY76223 represent the secreted proteins encoded by the 97 cc e.g. by protein or gene therapy. Also pathological conditions, cc e.g. by protein or gene therapy. Also pathological conditions can be cidagnosed by determining the amount of the new polypeptides in a sample cc or by determining the presence of mutations in the new genes. Specific cc uses are described for each of the 97 genes, based on which tissues they cc are most highly expressed in, and include developing products for the cc diagnosis or treatment of cancer, tumours, developmental abnormalities cand foetal deficiencies, blood disorders, diseases of the immune system, cc disorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skiney cc disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney cc disorders, diseastey inflammation, allergies, Alzheimer's and AIDS. The corrected mortaine in AAY76224 to AAY76424 represent fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membrane protein. The encoded protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopoiesis activity, tissue growth activity, haematopoiesis activity, tissue growth activity, haemostatic and thrombolytic activity, anti-inflammatory activity and tumour inhibition activity. The present sequence could therefore be used for treatment of autolimune disease, Alzheimer's disease, Parkinson's disease, and cancer via gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 20

```

secretory proteins play important roles in the proliferation control, differentiation induction, the material transport and the biophylaxis cells, Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The

prevented using SECX proteins or nucleotides include cancer (e.g., colorectal carcinoma, prostate cancer), benign tumours, immune disorders

colorectal carcinoma, prostate cancer), benign tumours, immune disorder (including autoimmune diseases, transplant rejection, allergies, AIDS),

disorders,

```
CC of the invention are either secreted or membrane-associated proteins
CC and act as regulator of cellular proliferation and differentiation. SECX
CC proteins or nucleotides are useful for diagnosing the presence of, or
CC predisposition to, a disease associated with altered levels of SECX
CC proteins and nucleotides. The SECX proteins are also useful to screen
CC compounds that modulate SECX activity or expression. The interaction of
CC compounds that modulate SECX activity or expression. The interaction of
CC a SECX protein with other cellular proteins may be useful to modulate
CC the activity of a partner protein, cellular proliferation, cellular
CC differentiation and cell survival. SECX nucleotides are useful for the
CC recombinant expression of SECX protein, and may be used detect SECX mRNA
CC or genetic lesions in the SECX gene. They may also be used to modulate
CC SECX expression (e.g., using antisense oligonucleotides). SECX nucleic
CC acid sequences are also useful for identifying a cell or tissue type in
CC acid sequences are also useful for identifying a cell or tissue type in
CC useful for detecting the presence of SECX nucleotides and for screening
CC tissue cultures for contamination. Diseases that may be treated or
Creamented mains serve proteins or nucleotides and concer (e.g.

                                                                                                                                                                                                                                                                                        Alignment
Pred. No.:
                                                                                                                                                                                                                                                                                                                                                                     cc polypeptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The cc polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques cc to restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating cc disgrders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cannot acid sequences. AAS64197-AAS94564 represent novel human cc anticological active with the sequence of the invention.

CC Note: The sequence data for this patent did not appear in the printed can the print of the products of the printed of the sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of muta responsible for genetic disorders or other traits and to ass biodiversity -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drmanac
